CONCRETE REPAIR SERVICES

The first step in fixing a problem is understanding what caused it. That's why Browning Chapman's concrete repair services begin with a thorough, experienced assessment of your building or surface. Once we've identified the source of failure, we're able to apply the proper repair method. Whether the treatment required is superficial, partial depth or full depth, we've got the materials, tools and knowledge to provide a professional solution that lasts.

BUILDING ENVELOPE ASSESSMENT

After examining your structure from top to bottom, we'll offer a clear, detailed repair plan.

INTERIOR REPAIRS

Expert evaluation and durable resolutions for your building's structural integrity issues.

EXTERIOR REPAIRS

We offer comprehensive plans ranging from short-term shoring to lasting restoration.

CARBON FIBER STRENGTHENING

Partial and full-depth repairs reinforce columns, beams, overhead surfaces and floor slabs.

CONCRETE

Structural concrete repairs include everything from carbon fiber wrap to epoxy injection.

EXPANSION JOINTS

Repairing, sealing or replacing expansion joints (vertical and horizontal) helps your concrete to withstand thermal-induced volume changes.

SEALANTS

Our sealant installation services preserve your structure's exterior by keeping water out.

CRACKS

After tracing cracks to their source, we provide solutions that prevent more serious problems.

INJECTION

Our pressure injection and grouting solutions include: epoxy resin; polyurethane grout; and polyurethane, epoxy, and cementitious slab stabilization grouting.

POST-TENSIONING

Mitigating corrosive conditions in post-tensioned concrete helps reduce structural failure risks.

SUPPLEMENTAL STEEL

Our restoration of structural steel components helps to reinforce stairwells and parking decks.

PNEUMATIC MORTAR

When sprayed concrete is the most proper repair solution, we'll supply it—quickly and skillfully.
